INTRODUCTION

Rugby School seeks to develop the whole person so in our academic provision we aim to challenge students to exercise and enrich their entire mind. A breadth of intellectual experiences in the E and D Block years allows our students to face academic challenge and to develop their understanding of both the physical and imaginative worlds they inhabit. We aim to provoke a curiosity in our students which they will be able to follow up with the support of subject specialists outside the classroom, through our extensive programme of academic enrichment, clubs and societies.

The subject matter studied at GCSE and IGCSE is of intrinsic value and interest. Students receive a grounding in the powerful knowledge that underpins our understanding of the modern world and humanity more broadly. They should select courses of study they find engaging and thought provoking, as well as useful in a practical sense.

Lessons at Rugby School are intellectually stimulating and fun. We want our students to develop the confidence and experience necessary to manage and direct their own academic work. We aim for them to be enquiring in their approach to academic study, to learn to reflect on their work and to show both resilience and versatility, particularly when confronted with challenges. Our aim is for them to become effective communicators and collaborators, maintaining a global perspective in their approach which, in turn, helps them to remain open to others and to embrace diversity.

N.B. All GCSE and IGCSE examinations are graded on a 9 – 1 scale

STRUCTURE AND OPTIONS

The E and D Block curriculum allows for an element of choice for our students, yet we have structured it to ensure the diversity of experience that we value as a School. Students sit GCSEs and IGCSEs in the Trinity term of the D Block.

All students study a core of subjects that includes English (Language and Literature), Mathematics, a Modern Language and Sciences. The Science curriculum allows students to choose either Double Award (combined) or Triple Award (separate) Science. Double Award allows students to study all three Sciences (Biology, Chemistry, Physics) for which they are awarded two Science GCSEs. Triple Award involves the study of all three Sciences as individual GCSEs. Both Science courses are equally demanding; Double Award is studied in less time. Students then have a free choice for their remaining four I/GCSEs if studying Double Award Science, or three options if choosing Triple Award.

The range of options includes Art, Classical Civilisation, Computing, Design & Technology, Drama, French, German, Geography, Greek, History, Italian, Latin, Mandarin (for those with suitable experience), Music, Philosophy & Theology, Sports Science or Spanish. Music Scholars must study Music GCSE and should consider choosing double music. That is, music as a GCSE and music as an additional option in which to schedule as many instrumental lessons as possible. Art, Design, Computing and Drama Scholars must choose the subject for which they have a scholarship as one of their subject options.

In addition to their GCSEs, students also participate in regular Divinity classes and Sport along with specialist PSHE lessons that complement our weekly tutorial and student wellbeing programme. E and D Block students are also involved in Higher Education and Careers events. All students have weekly one-to-one tutorials with their Tutor which is an opportunity to discuss the academic, higher education, careers, enrichment and pastoral strands of their lives.

N.B. both Triple and Double Award Science allow entry to IB Higher Level and A-level Science in the Sixth Form, although Triple Award is preferable for students who know that their future study will be focused on Science.

N.B. while we aim to offer as wide a choice of subjects as possible, we cannot guarantee to provide a subject if the number of students who choose it is very low. If students change their mind after subject choices have been finalised, we will endeavour to accommodate their request but we cannot guarantee that we will be able to make changes. No subject changes are allowed after the first half-term in the Advent term of the E Block year; it would be rare for a student to make subject changes after the first Exeat weekend in the Advent term.

N.B. syllabus and assessment details are correct at the time of publication but are subject to modification as a result of changes made by exam boards.

ART & DESIGN

HEAD OF DESIGN TECHNOLOGY: Alice Melarkey
EMAIL: AKM@rugbyschool.net

HEAD OF ART: Helen Lambie-Jones
EMAIL: HLJ@rugbyschool.net

ART

AIMS

GCSE Art and Design equips students with the skills to enjoy, produce and engage with the visual arts throughout their lives. It has immense value in a broad and balanced curriculum enhancing students' learning across their subjects. This is an exciting course that gives students the opportunity to explore painting, printmaking, sculpture, ceramics, photography, digitally-generated imagery, textiles, drawing and many more art-making techniques. It also enables students to develop their artistic skills, creative thinking and their understanding of art history.

NATURE OF THE COURSE

Work is assessed using criteria set by the exam board and takes into account:

- the process of gathering visual information
- understanding the works of artists
- developing, reviewing and modifying ideas
- accumulating skills and techniques
- producing artwork which is the result of extended visual research.

It is challenging, enjoyable and rewarding. It requires determination and commitment.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

- The Personal Portfolio is designed to give students the opportunity to comprehensively experience a wide range of methods and techniques as they explore their ideas, develop their skills and build a solid understanding of artists and designers. Coursework accounts for 60% of the mark.
- The Externally Set Assessment is a broad-based thematic 'starting point' set by the exam board. Preparatory studies, drawings, media exploration and research are completed over an 8-week period before the exam. A final resolved artwork is produced under exam conditions over 10 hours (broken into separate blocks of time over two days). The Externally Set Assignment (portfolio of preparatory studies and final resolved artwork) accounts for the remaining 40% of the mark.

ENRICHMENT OPPORTUNITIES

Students have opportunities to visit national galleries and collections to enable the research and the collection of source material. Outside of lessons the department has extensive opening hours for students to attend development and enrichment sessions. The Lewis Gallery (housed within the Design Centre) has a programme of exhibitions and visiting speakers which are accessible as source material for coursework projects. Exhibitions of student work are arranged at points during the year so that students learn to curate and present their work to an audience beyond their peers in the studio.

DESIGN & TECHNOLOGY

AIMS

Technology can be defined as the application of skills, knowledge and creativity in finding solutions to a particular need or problem. Combined with an understanding of the aesthetic, anthropometric requirements and functional elements of products, we can develop an understanding of how to design and manufacture a wide range of useful products. We want students to be confident in managing projects independently and to develop a creative approach to problem solving.

We aim to develop an understanding within our students of what makes a successful product and how to identify the factors that determine success. We want our students to be actively involved in thinking creatively to improve the quality of life for themselves and society in general. Students will learn to develop new ideas by reflecting on lessons learnt in the past and to critically evaluate their own work and that of others.

NATURE OF THE COURSE

We use a variety of interesting practical projects to deliver the material during the first year of the course. Projects explore a range of manufacturing processes from traditional craft skills to semi-automated batch production that lead to the production of useful artefacts. Students are made aware of the sources of a range of materials, how they are processed for use, how they can be reused, recycled or disposed of and the environmental consequences of their use. Through hands-on experience they learn to recognise the properties, working characteristics and possible combinations of a range of resistant and compliant materials. Students are taught a range of drawing and presentation techniques and develop methods of creativity that allow them to complete a major design-and-make project in the second year of the course.

ASSESSMENT DETAILS

Examination board: CAIE

[CLICK HERE](#)

COMPONENT 1: A product design exam paper and a resistant materials or systems and control paper. For product design, candidates will provide creative responses to a given design task whilst the second asks candidates to answer questions about theoretical knowledge and its application.

COMPONENT 2: Design and Making Practice, approximately 45 hours of coursework that consists of a single design-and-make activity.

ENRICHMENT OPPORTUNITIES

The department is open frequently for students to work on coursework or independent projects during their free time. There are also an Engineering Club, F1 Schools, Jewellery Club and a design consultancy that features group projects and regular talks from outside speakers from a range of Design disciplines.

CLASSICS

HEAD OF CLASSICS: Will Nicholl
EMAIL: WDN@rugbyschool.net

CLASSICAL CIVILISATION

AIMS

Students who enjoy discovering the ancient world, with its rich web of mythology, history, philosophy and politics, will be perfect candidates for Classical Civilisation. The material learnt is not only entertaining, but also allows students to develop their ability to analyse a wealth of ideas presented by Greco-Roman culture, like the inspection of the morality of gladiatorial shows and slavery. In reading the English translations of works of ancient authors like Homer, Virgil and Ovid, students will develop a greater appreciation of their own language and its usage. Classical Civilisation incorporates elements of History, English, Philosophy, Politics, Economics and Geography to facilitate an in-depth study of two civilisations which have shaped the Western world.

NATURE OF THE COURSES

At GCSE, students learn about Myth and Religion and Roman City Life. The study of Myth and Religion will allow exploration of the tales involving gods and heroes in both the Greek and Roman worlds. Additionally, in the study of temples, sacrifice, festivals and death, students will receive a broad overview of religion in the ancient world and will be given an opportunity to study a wide variety of material remains, including remarkable temples and works of art, like the Temple of Zeus at Olympia or the glorious Pantheon in Rome.

The Roman City Life module focuses on popular sites and artefacts from Rome, Ostia, Pompeii and Herculaneum. This component comprises a cultural element, focusing on the lives of people in the Roman world, and a literary element which introduces students to some outstanding works of Roman poetry and prose in English translation.

ASSESSMENT DETAILS

Examination board: OCR

[CLICK HERE](#)

Thematic Study: Myth and Religion – 1 hour 30 minutes

Literature and Culture: Roman City Life – 1 hour 30 minutes

ENRICHMENT OPPORTUNITIES

The department organises an annual overseas trip and students studying Classical Civilisation will be given an opportunity to visit various landmarks of the classical world. Students will see for themselves the sites they are studying. There are regular local trips to Roman settlements such as Bath, Corinium, as well as to the British Museum. We firmly believe that getting to know classical culture on British soil and abroad puts the study of Classics into perspective and inspires students to think about the past. The Junior Arnold Society also meets regularly to allow students to explore their interests further through activities and games.

CLASSICAL GREEK

AIMS

Classical Greek is a favourite subject of some of the most academic students in the school. Students especially enjoy learning about the impact of Greek on English vocabulary, deciphering complex sentences and working in a small group of enthusiastic peers. They also quickly learn to appreciate that the ‘Greek genius’ that has brought us mathematical theories, philosophy, democracy and oracy can only be truly understood through reading the original language. Students will have the opportunity not only to develop their enjoyment of languages in general, but also to study a selection of exciting original set texts, like Herodotus’ *The History* and Homer’s *Iliad*.

NATURE OF THE COURSE

The course develops students’ language skills and ability to deal with Greek texts, building on the material studied in the F Block. The stories from Taylor’s *Greek to GCSE 2* offer students an insight into core ideas in the study of Classics (e.g. military leadership and the philosophy of Socrates).

Additionally, students will study two set texts. This year’s verse text comes from Euripides’ *Medea*, a powerful tragedy about the rage of a scorned woman which is considered foundational to feminist and post-colonial literature. The prose text is comprised of sections from Herodotus, the ‘Father of History’, in which he explores Babylonian history and culture.

ASSESSMENT DETAILS

Examination board: OCR

[CLICK HERE](#)

Language Paper: (50% of the course) – 1 hour 30 minutes

Prose Literature Paper: (25%) – 1 hour

Verse Literature Paper: (25%) – 1 hour

ENRICHMENT OPPORTUNITIES

The department organises an annual overseas trip and students studying Classical Civilisation will be given an opportunity to visit various landmarks of the classical world. Students will see for themselves the sites they are studying. There are regular local trips to Roman settlements such as Bath and Corinium, as well as to the British Museum. We firmly believe that getting to know classical culture on British soil and abroad puts the study of Classics into perspective and inspires students to think about the past. The Junior Arnold Society also meets regularly to allow students to explore their interests further through activities and games.

LATIN

AIMS

Combining true academic rigour with literature, history, and culture, Latin offers a unique series of challenges. Alongside language-learning skills, Latin practises forensic analysis and tests logic and reasoning to the utmost. Its cultural heritage also provides stories about inspirational heroes and historical figures and enables students to discuss moral and philosophical issues. Latin offers the extraordinary opportunity to be charmed in the present day by texts written 2000 years ago. This includes accounts of the intrigues of Imperial Rome and the story of Aeneas’ journey to found Rome, as narrated by the exquisite verse of Virgil.

NATURE OF THE COURSE

The course follows on from F Block study, using Taylor’s *Latin to GCSE 2* supplemented by the department’s own resources. Students will have encountered much of the grammar and vocabulary required already and will be well equipped to continue the course at GCSE level. As in F Block, themes encountered in language work will be explored further in order to inspire students to understand the breadth of the subject (e.g. tales of the Roman Republic, the expansion of Rome in Italy, Hannibal, Caesar and other Roman emperors).

Additionally, students will study two set texts. This year’s verse text is taken from one of the most famous and lauded pieces in literary history: Virgil’s *Aeneid*. In the prescribed section of Book 1, Juno enlists the help of wind god Aeolus to raise a storm which will send Aeneas and his Trojan comrades to the shore of Carthage and Queen Dido’s palace. The prose text comprises a section from Cicero’s prosecution speech *In Verrem*, a defamatory attack against the corrupt governor of Sicily, and a section from Livy’s *Ab Urbe Condita*, in which he extols the bravery of Mucius Scaevola and Cloelia in the face of an Etruscan blockade of Rome.

ASSESSMENT DETAILS

Examination board: OCR

Students will see for themselves the sites they are studying. There are regular local trips to Roman settlements such as Bath and Corinium, as well as to the British Museum. We firmly believe that getting to know classical culture on British soil and abroad puts the study of Classics into perspective and inspires students to think about the past. The Junior Arnold Society also meets regularly to allow students to explore their interests further through activities and games.

ENGLISH

HEAD OF ENGLISH: Tom Eyre-Maunsell
EMAIL: TEM@rugbyschool.net

ENGLISH LANGUAGE

AIMS

The aim of the IGCSE course is to cultivate fluency in writing so that students learn to express their thoughts with grammatical accuracy and greater precision. We want students to: develop personal writing so that feelings are fully and confidently explained; take risks with creative writing so they are enjoyably experiencing new genres; and sharpen analytical skills with both literary and non-fiction texts. Students learn new technical terms which allows their analysis to be more precise and sophisticated.

NATURE OF THE COURSE

This is a course which centres on skills rather than content or knowledge. Teachers concentrate on:

- honing comprehension skills;
- introducing new technical terms, such as ‘connotations’, ‘register’, ‘anaphora’ (in addition to already well-known ones such as metaphor and simile) which allow for sophisticated discussion of unseen comprehension texts and texts from the Anthology studied for the exam;
- showing ways in which personal writing can be carefully developed (for the exam and coursework);
- offering opportunities for different kinds of creative writing.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

The exam comprises:

- an unseen comprehension exercise;
- a question on an Anthology text (10 are studied for the exam);
- a comparison question between the Anthology text and an unseen text;
- a piece of personal/discursive writing, possibly in a certain genre, say, a speech, or an article for a magazine.

The coursework comprises:

- a piece of personal or creative writing;
- analysis of a poem or piece of prose from a choice of texts in the Anthology.

ENGLISH LITERATURE

AIMS

This course aims to give students the opportunity to read texts from a variety of genres in depth, making them aware of literary techniques and terminology. It also helps them articulate responses to these (and other) texts in class discussion, or in the form of essays, which demand careful structuring and the elaboration of extended argument with accurate textual exemplification. A piece of coursework allows a more extended response to a group of poems on a common theme.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

The exam comprises:

- analysis of an unseen poem;
- comparison of two poems, which have been studied in advance (students study the 16 poems provided in the Anthology);
- an essay on a Modern Prose text (i.e. a C20th novel): the teacher chooses from a list of five novels.

Coursework comprises:

- an essay on a Modern Drama text: the teacher chooses from a list of five texts;
- an essay on a Literary Heritage text: the teacher chooses from a list of five texts.

ENRICHMENT OPPORTUNITIES

- The annual Rupert Brooke Competition allows students the opportunity for creative writing beyond the syllabus.
- There is also a creative writing club which meets in Stanley House every Sunday at 11:30.
- Students are invited to join the annual Creative Writing trip. This is a week-long retreat in the countryside with two professional writers. This year the trip is to playwright John Osborne’s house in Shropshire.
- The brightest students might also want to come along to Landor Society, our weekly literary society, Thursdays at 5:00pm.
- Teachers, depending on the students’ seeming workload and the length of the holiday, set a holiday reader so that students are reading more than simply the set texts studied in class.
- A reading list, comprising of recommendations from teachers in the department, is sent to all E and D Block students at the start of the year.
- A Junior House Debating competition takes place in the Lent Term.
- All students are invited to take part in the annual Poetry By Heart competition. This year celebrates poetry from the 21st century.

HUMANITIES

HEAD OF GEOGRAPHY: Joanne Brett
EMAIL: JB@rugbyschool.net

HEAD OF HISTORY: Tim Guard
EMAIL: TDG@rugbyschool.net

HEAD OF PHILOSOPHY & THEOLOGY: Amanda Parker-Jones
EMAIL: ALPJ@rugbyschool.net

GEOGRAPHY

AIMS

The aim of the GCSE Geography course is to develop the fundamental building blocks of geographical knowledge and establish a geographical understanding of places, environments, and processes. The course is designed to actively engage students in the process of enquiry and to equip them with the lifelong skills of observation, investigation, analytical thought and debate. Over the duration of the course, students come to realise the relevance of geographic concepts to our ever-changing world, both on a local and global scale. Students also have the opportunity to apply this knowledge by undertaking fieldwork which includes the collection of both primary and secondary data, presenting and analysing that data, and drawing conclusions.

NATURE OF THE COURSE

The course develops knowledge and understanding of Physical Geography through studying Hazardous Environments and River Environments. The Human Geography element focuses on Urban Environments and Economic Activity and Energy. There is also a topic on Global Issues in which students study Development and Human Welfare. Finally, students will be asked to answer questions on the fieldwork investigations that they have completed; this is a compulsory part of the course and there will be two days of fieldwork to support it.

ASSESSMENT DETAILS

Exam board: Edexcel iGCSE

[CLICK HERE](#)

Paper 1 Physical Geography – (40%)

Section A

- River environments
- Hazardous environments

Section B

- Investigating river environments

Paper 2 Human Geography – (60%)

Section A

- Economic activity and energy
- Urban environments

Section B

- Investigating urban environments

Section C

- Development and human welfare

ENRICHMENT OPPORTUNITIES

In the E Block students can contribute pieces towards the Geography Department magazine, GAIA. These Wednesday afternoon sessions are also supported by Geographers in the LXX. In addition to this, students are encouraged to enter competitions organised by the Royal Geographical Society, such as the Young Geographer of the Year.

The Department also organises an enrichment trip to Iceland every second year during the February half-term, which is a fantastic opportunity to learn more about the interaction between the human and physical worlds.

HISTORY

AIMS

The philosophy behind the Modern World course is to test not what candidates learn by heart but what they know, understand and can do. The course, in other words, teaches skills of analysis as well as facts. Two in-depth studies, Revolutionary Russia and Hitler’s Germany, provide the core at E Block and an opportunity for focused comparative study.

The chronological and conceptual span is more expansive in the D Block, ranging from the brinkmanship of the Cuban Missile Crisis to the struggle for democratic and economic freedoms in the Middle East. There is plenty of flexibility to allow for student learning above and beyond the syllabus. Students are expected to carry out their own research programme based on textbooks, library research and intelligent use of podcast and internet sources.

NATURE OF THE COURSE

The Edexcel IGCSE possesses a strong internationalist flavour, taking in a wide sweep of global and European affairs from 1914 to the 2010s. Topics include: the Russian Revolution; the Great Depression; life in Weimar Germany; the rise of Hitler; life in Nazi Germany; and the outbreak of World War Two. Global and regional studies include: in-depth analysis of the nuclear arms race and Cold War tensions; the breakdown of European imperial structures; tensions in the Middle East and the Arab Spring. The course challenges assumptions about the international order of today through the prism of 20th-century change.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

Paper 1: (90 mins.) Development of dictatorship: Germany, 1918-45; World divided: Superpower relations, 1943-72 (50%)
Paper 2: (90 mins.) Russia in Revolution, 1905-24; The Middle East: conflict, crisis and change, 1919–2012 (50%)

ENRICHMENT OPPORTUNITIES

Students have the opportunity to attend the History Department’s visiting lecture series and to participate in trips to Cosford National Cold War Museum and a residential trip to Berlin, Krakow and Auschwitz in the D Block.

PHILOSOPHY & THEOLOGY

AIMS

Can religion survive in a secular society? Why is Christianity the most persecuted religion in the world? Do all religions lead to the same God?

Philosophy and Theology challenges students to consider the very nature of their existence, its origins and its possible meanings. Philosophy and Theology is a thought-provoking and academically rigorous subject that offers both breadth and depth of learning that is unparalleled.

Philosophy and Theology allows students to gather an impressive set of skills as students are required to think critically, understand different points of view and develop an evaluative approach to learning and processing new information. The subject will complement any set of GCSE subjects and will help prepare students for their further education.

NATURE OF THE COURSE

Philosophy and Theology follows AQA Religious Studies A which covers both Judaism and Christianity, as well as having a considerable proportion dedicated to Philosophy and Ethics. Even when learning about religions there are considerable life questions to be asked. For example, is it morally right to baptise an infant who is unable to make their own religious choices?

Half of the course is dedicated to Philosophy and Ethics. Within this we discuss whether there is proof for the existence of God, the realities of science and religion working in harmony, and the notion that war can ever be justified. The subject will enable you to form substantiated, clear opinions that allow for convincing arguments.

ASSESSMENT DETAILS

Examination board: AQA

[CLICK HERE](#)

Paper 1 – Christianity and Judaism (50%)
Paper 2 – Philosophy and Ethics (50%)

ENRICHMENT OPPORTUNITIES

The department is very pleased to offer additional educational visits and conferences to support interest and challenge within the subject. Current plans include:

- F Block: day visit to a mosque and a cathedral
- E Block: day visit to a synagogue
- D Block: GCSE conference led by Dr Peter Vardy

MATHEMATICS

HEAD OF COMPUTER SCIENCE: Lisa Bell
EMAIL: LAB@rugbyschool.net

HEAD OF MATHEMATICS: Nicholas Jones
EMAIL: NJ1@rugbyschool.net

COMPUTER SCIENCE

AIMS

GCSE Computer Science students are exposed to opportunities to develop their Mathematics, Science and English skills in addition to understanding and applying the core principles that form the basis of Computer Science.

The course encourages the students to:

- think creatively, analytically and logically, inside and outside the classroom
- understand and apply the fundamental principles and concepts of Computer Science, including abstraction, decomposition, logic, algorithms, and data representation
- analyse problems in computational terms through practical experience of solving such problems, including designing, writing and debugging programs
- think creatively, innovatively, analytically, logically and critically
- understand the components that make up digital systems, and how they communicate with one another and with other systems
- understand the impacts of digital technology on the individual and on wider society
- apply mathematical skills relevant to Computer Science

NATURE OF THE COURSE

Software development and the teaching of fundamental programming techniques form the foundations of the GCSE course. Students will study the design of algorithms in relation to a range of problems, produce robust programs that consider computational logic and data representation, and utilise suitable integrated development environments that aid with debugging. Learners will also gain an understanding of the components that make up a computer system and the way in which hardware and software interact to form secure, networked connections. Ethical, legal, cultural and environmental implications of digital systems are investigated by students and they will consider how computational thinking aids a range of situations.

ASSESSMENT DETAILS

Examination board: OCR

[CLICK HERE](#)

- Computer systems: 1 hour 30 minutes – 50%
- Computational thinking, algorithms and programming: 1 hour 30 minutes – 50%

ENRICHMENT OPPORTUNITIES

- Regular society meetings that discuss computing-related problems and a range of technological affairs. Students are encouraged to develop and share their programming skills within this forum.
- During the course of the year the students are encouraged to participate in a range of coding competitions.

MATHEMATICS

AIMS

Whilst acknowledging the need for routine practice of algebraic and numerical skills, the Mathematics Department provides training of analytical thought and also the ability to solve problems in context wherever possible. Enrichment is provided to a wide range of students: additional support workshops take place throughout the week. Our accelerated sets regularly encounter material designed to stretch thinking towards A-level. Mathematical resilience is thus developed; we try to instil in our students the confidence to take risks and the ability to develop elegant solutions.

NATURE OF THE COURSE

The IGCSE Mathematics course is broadly split into five key areas: Number; Algebra; Graphs; Shape and Space; and Handling Data. It also provides preparation for further study through topics such as Functions, Basic Calculus and Set Theory.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

The qualification comprises two papers taken in the Summer term of the D Block. Both are calculator papers and all of our students take the Higher Tier. If appropriate we will suggest the Foundation Tier to some students, but this happens rarely.

Edexcel Mathematics A Paper 1H, reference code 4MA1/1H, two hours

Edexcel Mathematics A Paper 2H, reference code 4MA1/2H, two hours

Syllabus topics are split between the two papers, which are intended to be of equal difficulty.

ENRICHMENT OPPORTUNITIES

- Junior Mathematics Society
- UKMT Team Challenge
- UKMT Intermediate Mathematics Challenge
- Supported study and 1-1 support

FURTHER MATHEMATICS

AIMS

Very able mathematicians can find the material in the IGCSE course relatively straightforward. Each year, our two accelerated sets in the E and D Blocks study an enrichment qualification that deepens their understanding of IGCSE topics whilst extending into aspects of the IB Diploma and A-level Mathematics. The Further Mathematics course poses complex problems as well as more lengthy questions and contains interesting applications such as Matrices and Geometric Proof.

NATURE OF THE COURSE

The Further Mathematics course splits into six sections which are Number, Algebra, Coordinate, Geometry, Calculus, and Matrix Transformations.

ASSESSMENT DETAILS

Examination board: AQA

[CLICK HERE](#)

The course is examined through two papers in the Summer term of the D Block. Paper 1 is a 90-minute non-calculator paper and Paper 2 is a two-hour calculator paper.

ENRICHMENT OPPORTUNITIES

Further to the enrichment opportunities available to all IGCSE mathematicians, we offer Further Mathematics supported study sessions and Intermediate and Senior Mathematics mentoring.

MODERN FOREIGN LANGUAGES

HEAD OF MFL: Louis Callan
EMAIL: LCA@rugbyschool.net

HEAD OF FRENCH: Charlene Piquard
EMAIL: CP1@rugbyschool.net

HEAD OF GERMAN: Chris Brown
EMAIL: CMB@rugbyschool.net

HEAD OF ITALIAN: Beatrice Parolin
EMAIL: BP@rugbyschool.net

HEAD OF SPANISH: Katie Adams
EMAIL: KAD@rugbyschool.net

MODERN FOREIGN LANGUAGES (FRENCH, GERMAN, ITALIAN, MANDARIN, SPANISH)

AIMS

In all of the Modern Languages taught in the department, we aim to give students an enjoyable and fulfilling experience. At the end of the course, students should feel confident communicating a wide range of ideas orally and in writing and should have an excellent grounding in listening and reading. We teach students to be precise with language and to value the presentation of their work. Active learning is central to successful language teaching and so interaction plays a vital part in our lessons.

All students will find that their confidence grows in their chosen languages and that they finish the course keen to learn more. Grammar is vital for success and is taught alongside and embedded in a wide range of communicative activities. We also provide an insight into the countries where the language is spoken through film, short stories or our native speakers.

NATURE OF THE COURSE

We cover a range of language and topics, including referring to past, present and future events. We regularly go beyond these but topics in the syllabus include: everyday activities; personal and social life; the world around us; the world of work; and the international world.

ASSESSMENT DETAILS

Examination board: CAIE

French

- Paper 1: Listening
 - Paper 2: Reading
 - Paper 3: Oral
 - Paper 4: Writing
- [CLICK HERE](#)

German

- Paper 1: Listening
 - Paper 2: Reading
 - Paper 3: Oral
 - Paper 4: Writing
- [CLICK HERE](#)

Italian

- Paper 1: Listening
 - Paper 2: Reading
 - Paper 3: Oral
 - Paper 4: Writing

Examination board: Edexcel

Mandarin

- Paper 1: Listening
 - Paper 2: Speaking
 - Paper 3: Reading
 - Paper 4: Writing
- [CLICK HERE](#)

Spanish

- Paper 1: Listening
 - Paper 2: Reading and Writing
 - Paper 3: Speaking
- [CLICK HERE](#)

ENRICHMENT OPPORTUNITIES

The department provides a range of opportunities for students to develop their interest in the subject: European Film Club; the UK Linguistics Olympiad; languages bake-off evenings; Onatti foreign language plays; German taster trip to Vienna (F Block); Middle School French trip to Opal Coast; Spanish Homestay to Valladolid; advanced conversation sessions; and the chance to enter regular essay and translation competitions. We also have a well-stocked Modern Languages library, which students are welcome to use.

OTHER LANGUAGES

We teach French, German Italian and Spanish. We also offer Mandarin subject to sufficient numbers selecting the subject. The Mandarin course is not available for beginners or for native speakers.

NATIVE SPEAKERS

Whilst we are happy for students to sit a GCSE in their native language, we would sound a note of caution. We do not offer teaching in languages other than those mentioned above and so it is the student’s responsibility to prepare to a suitable standard. Furthermore, it is important to be aware that it is not the number of GCSEs that impresses universities but rather the quality of the grades obtained. They may be unimpressed with anything less than a Grade 9 from a native speaker. Often, therefore, it is better to spend more time concentrating on the subjects that are being undertaken on timetable.

PERFORMING ARTS

HEAD OF ACADEMIC DRAMA: Sammy Farmer
EMAIL: SJF@rugbyschool.net

HEAD OF ACADEMIC MUSIC: James Williams
EMAIL: JAW@rugbyschool.net

DRAMA

AIMS

The GCSE in Drama at Rugby Schools aims to inspire creativity and confidence in its students. Students develop highly sensitive communication and critical skills as theatre makers, researchers and reflectors. Throughout the course, students are given unique platforms to engage with and challenge live audiences, to debate contemporary political and social issues and to learn effective presentation skills. Through a dynamic combination of group and solo practical work, written criticism and academic study of playscripts, students develop a broad range of skills and an ability to discern and analyse what makes effective theatre. During the course, students will create a range of original theatre for a live audience and, through this, become more outward-looking and risk-taking, as well as being culturally, politically and socially ‘plugged in’.

NATURE OF THE COURSE

Through practical and theoretical study, learners develop an understanding and enjoyment of drama, developing group and individual skills and studying ways to communicate ideas and feelings to an audience.

Learners consider the elements of practical drama and how to work with extracts from published plays as an actor, director and designer. They learn how to devise, develop and structure their own original dramatic material from stimuli such as short titles, poems, pictures, songs, historical events and stories; how to evaluate their contribution to the devising process and the success of the final piece, and finally, how to use staging and design as part of a dramatic performance.

ASSESSMENT DETAILS

Examination board: CAIE

[CLICK HERE](#)

Component 1: (40%) – written examination 2h30 mins – externally assessed

Component 2: (60%) – coursework – Internally assessed and externally moderated

Candidates submit three pieces of practical work:

- individual performance based on an extract from a play
- group performance based on an extract from a play
- group performance based on an original devised piece.

ENRICHMENT OPPORTUNITIES

All GCSE students are encouraged to attend weekly drama activities and to audition for school productions. Many opt to undertake LAMDA and Dance lessons. Theatre trips take place up to twice a term and these carry an additional charge. Members of the department are available throughout the week to support students as they work on particular aspects of the course.

MUSIC

AIMS

Students who study Music GCSE develop three main skill areas: composition; performance and listening. In composition, students learn the fundamental skill of creating musical ideas, developing them and presenting them in a score. In performance, students further develop their instrumental control, as well as their ability to communicate expression. In listening, students learn about a range of genres including:

- **Classical Music** (including Baroque, Classical, Romantic)
- **Music for Words** (including Popular Music and Music Theatre)
- **Music for Dance** (including Electronic Dance Music, Tango and Salsa)
- **Music for Small Ensembles** (including Silk and Bamboo ensembles, Hindustani Classical Music and Arab Takht Ensembles)
- **Music for Stage and Screen** (including Ballet, Film Music and Computer Game Music).

NATURE OF THE COURSE

Students will become familiar with the areas of study through listening to and analysing a broad range of music; developing more advanced theoretical and notation-based knowledge to support this understanding.

There are no ‘set works’; the choice of music that students study is inspired by the students’ own musical interests within each prescribed area of enquiry. This will cover a variety of classical music, popular music, electronic music and world music styles. Students will also compose their own musical ideas, and develop their ability to notate them using notation software in classroom composition lessons. These are workshop-based lessons and held in a particularly collaborative and creative format.

ASSESSMENT DETAILS

Examination board: CAIE

[CLICK HERE](#)

30% performance coursework

4 – 10 mins in total; one solo and one ensemble recording, roughly Grade V standard

30% composition coursework

Two original and contrasting pieces; one in a free choice of style, one to a defined brief

40% listening exam

Where a series of eight extracts of recorded music are played to the students, covering all of the areas of study. For seven of these extracts, there are a variety of short answer or multiple choice questions. For one extract, there is a short descriptive question.

ENRICHMENT OPPORTUNITIES

- Visits to see set works in concert where performance schedules/school timetable permits, or performances arranged in School (played by School ensembles).
- Musical ensembles: participation is encouraged (but not compulsory) in any of the School’s ensembles including (non-exhaustive): Orchestra, Concert band, Jazz band, Chapel Choir, Rock Choir, Rock bands, and chances to perform as a soloist with a professional orchestra.

Music Scholars should consider the prospect of choosing double music. That is, music as a GCSE and music as an additional option in which to schedule as many instrumental lessons as possible.

SCIENCE

All students will study Edexcel IGCSE Biology, Chemistry and Physics. Students can opt to study Triple Award Science or Double Award Science.

TRIPLE AWARD

Students will be taught by subject specialist teachers in Biology, Chemistry and Physics and will have three lessons a week in each subject. Students will attain three GCSE grades, one for each subject and sit two papers per Science. Further information on each subject can be found in the following pages.

DOUBLE AWARD

Students will be taught by subject specialist teachers in Biology, Chemistry and Physics classes and will have two lessons a week in each subject. Students will attain two GCSE grades, derived from performance over all three subject papers. Students will only sit Paper 1 in each subject, therefore will not be required to learn all of the topics.

BIOLOGY

AIMS

The 21st century is set to be dominated by advances in Biology. Life sciences play a key role in tackling the global challenges that our students will face in their adult lives. The IGCSE in Biology develops an interest in and understanding of the living world so that our students can develop into biologically literate global citizens and lays the foundations for them to become leaders in the Life Sciences. We aim to deliver the course content through practical work as far as is possible, teaching the key principles of the scientific method. We believe this approach builds transferable skills that encourages our students to view the world in a critical way and develops resilience and creativity in the pursuit of solutions to problems.

NATURE OF THE COURSE

The course is divided into five sections. The Nature and Variety of Living Organisms covers the characteristics of all living organisms and compares the major groups. Structures and Functions in Living Organisms illuminates unifying themes in Biology as the process of diffusion by investigating the major organ systems of humans and plants. Reproduction and Inheritance deals with one of the ways in which information is passed from one generation to the next, how this process leads to variation and therefore how species can evolve through time. Ecology and the Environment investigates the interactions between organisms and the physical world, including the impact of humans. Use of Biological Resources looks at how humans use their knowledge of biological systems to their advantage and introduces students to controversial technologies such as cloning and genetic modification.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

The content is assessed over two written papers at the end of the course.

- Paper 1 is 120 minutes and counts for 61.1% of the qualification.
- Paper 2 is 75 minutes and counts for 38.9% of the qualification.

ENRICHMENT OPPORTUNITIES

Students are encouraged to:

- Attend the guest lectures from active scientists and related professionals.
- Join the Middle School STEM club.
- Learn about the care and handling of our pair of Royal Pythons.
- Take part in national Biology competitions such as the Biology Challenge run by the Society of Biology.

CHEMISTRY

AIMS

The world-renowned scientist Richard Feynman was once asked for the sentence that has advanced humankind the most. He immediately replied: “All things are made of atoms.” Atoms serve as the fundamental building blocks of Chemistry, which is how our course commences. Being the central Science, Chemistry is supported by a dynamic range of skills, particularly the ability to apply knowledge, analyse information, and evaluate results. As the course progresses, our students cultivate a propensity for critical, clear, and agile thinking. Ultimately, the department aims to cultivate a generation of open-minded inquirers who excel at applying new ideas in novel and exciting contexts.

NATURE OF THE COURSE

The Chemistry Department offers the Pearson Edexcel International GCSE. This syllabus is well established and universally recognised. The course is taught over both the E and D Blocks, with introductory groundwork taking place in the F Block.

Chemistry is divided into three parts:

1. Organic Chemistry is the study of carbon containing molecules. This encompasses a range of substances from fuels and plastics to perfumes and flavourings.
2. Physical Chemistry involves the application of mathematical skills to chemical contexts. Students are able to use calculations to predict chemical measurements.
3. Inorganic Chemistry is the holistic study of the periodic table. Nobel Prize winning work from the early 20th century is used to explain trends and predict properties.

ASSESSMENT DETAILS

Examination Board: Edexcel

[CLICK HERE](#)

The course is examined across two written papers that are both taken at the end of the D Block. 38–42% of the questions assess basic skills: knowledge and understanding. An equal weighting is given to more advanced skills: application, analysis and evaluation. The remaining written questions (19-21%) are based around experimental work. Students perform regular experiments throughout the course.

ENRICHMENT OPPORTUNITIES

We encourage students to consider the subject in context, enhancing their overall chemical aptitude and informing their choices for Sixth Form subjects. Additionally, students are invited to attend regular guest lectures given by active scientists and related professionals. Recent speakers have included the Nobel Prize-winning Chemist Sir Fraser Stoddart and the YouTube star Sir Martyn Poliakoff. Furthermore, the department extends invitations to D Block students to participate in training sessions for the Cambridge Chemistry Challenge, a national competition.

PHYSICS

AIMS

The IGCSE Physics course will develop students’ logical and problem-solving skills and ability to apply mathematical skills in a variety of physical contexts. During the course they will gain an understanding of the key concepts of forces – energy, waves and electricity – which underpin all of Physics and begin to apply these in situations including fluids and nuclear processes.

Throughout the course students will be developing practical skills in manipulating apparatus and data collection alongside interpreting relationships and understanding the limitations of data in developing conclusions. Students will gain an insight into the physical laws that underpin our universe on the smallest and largest scales. The department encourages students to read beyond the IGCSE syllabus and teachers will often expose the students to areas of Physics which they would encounter in the Sixth Form or at university.

NATURE OF THE COURSE

The Edexcel IGCSE course has been split into seven sections: Forces and Motion; Electricity; Waves; Energy; Solids, Liquids and Gases; Magnetism; Electromagnetism and Particles. Students will participate in a large number of experiments throughout the course and at the end of each topic they will sit an exam which comprises past exam questions and marked using exam board mark schemes.

ASSESSMENT DETAILS

Examination board: Edexcel

[CLICK HERE](#)

Paper 1: (66.7%) – 2-hour exam covering the core Physics content. It consists of structured questions which will be calculations or written explanations, along with a small number of multiple choice questions.

Paper 2: (33.3%) – 1-hour exam consisting of structured questions which will be calculations or written explanations, along with a small number of multiple choice questions.

The two exam papers will include some questions based on the practical work and experiments carried out throughout the course.

ENRICHMENT OPPORTUNITIES

- GCSE Astronomy for selected E Block students.
- Big Bang Physics Society for F and E Block students run by Upper School Physics students.
- Weekly supported study sessions.

SPORTS SCIENCE

AIMS

In the Sports Science department, we aim through the E and D Blocks, to develop students’ ability to plan, execute, analyse and improve all aspects of both theoretical and practical performance. We hope to encourage in-depth knowledge, skills and understanding of a range of relevant physical activities as well as an understanding of effective and safe performance. More broadly, we work with students to establish an understanding of the role of sport and physical activity in society and in the wider world. In the long term we hope students develop a desire for advanced study in Sports Science.

NATURE OF THE COURSE

The GCSE Sports Science course will equip learners with the knowledge, understanding, skills and values to develop and maintain their performance in physical activities and understand the benefits to health, fitness and well-being. This will require students to:

- develop theoretical knowledge and understanding of the factors that underpin physical activity and sport and use this knowledge to improve performance;
- understand how the physiological and psychological state affects performance in physical activity and sport;
- perform effectively in different physical activities by developing skills and techniques and selecting and using tactics and strategies;
- develop their ability to analyse and evaluate to improve performance in physical activity and sport;
- understand the contribution which physical activity and sport make to health, fitness and well-being;
- understand key socio-cultural influences which can affect people’s involvement in physical activity and sport.

ASSESSMENT DETAILS

Examination board: OCR

[CLICK HERE](#)

Component 1 – 1-hour written paper on factors affecting performance (30%)

Component 2 – 1-hour written paper on social, cultural and sports psychology (30%)

Component 3 – Coursework component consisting of three practical activity assessments and an evaluating performance written task (40%)

ENRICHMENT OPPORTUNITIES

- Attendance at Sports Science Society.
- Attendance at games sessions and extra-curricular clubs/activities to further personal performance in students’ main assessed activities.
- Attendance at lectures given by visiting speakers with a background in sport.
- Trips such as a visit to Nottingham University.
- Weekly supported study sessions.
- Use of the online virtual learning environment ‘Everlearner’.

BEYOND EXAMINATIONS

FUTURES ADVISORY SERVICE: Debbie Horner
EMAIL: DJH@rugbyschool.net

HEAD OF LEARNING DEVELOPMENT: Iain Murdoch
EMAIL: IWM@rugbyschool.net

HEAD OF PSHE: Lisa Greatwood
EMAIL: LJG@rugbyschool.net

CHAPLAINCY: Revd. Richard Horner
EMAIL: RMH1@rugbyschool.net

FUTURES ADVISORY SERVICE

The aim of the Futures Advisory Service is to prepare students for the transition into Higher Education and the world of work by building their professional profile whilst in School and by allowing students to explore a full range of options for their future. There is a team of Advisors based in the Collingwood Centre and each student has one-to-one meetings, presentations and support during their time at Rugby School. Teachers and Tutors also play a vital role in encouraging students to think ahead and build the skills necessary to be irresistible to future employers.

At the end of the E Block students are offered Psychometric Profiling (Morrisby) to help them to recognise their strengths, interests and aptitudes and suggest a wide variety of career areas to explore which may be a good fit. The profiling is followed up in School by Tutors and a one-to-one interview with the Futures team. The profiling is timed and structured to help students to choose A-level subjects appropriate to their future career paths.

Details of courses offered by outside organisations are advertised to students, and a growing awareness of future possibilities is fostered as students move through the School. Students are invited to attend the School's Medical and Engineering Societies which helps with considering future options.

The degree of contact a student has with the Futures Advisory Service increases as they move further through the School and in the Upper School the number of one-to-one meetings increases. Students explore a wide range of future options and make their university applications. Visiting speakers from a number of universities, ORs and employers are also invited to help each individual to make decisions about their future.

Every year the School hosts an extensive Careers Convention where Students are able to speak to a wide range of people about their day-to-day role and have the opportunity to engage with employers to work on real projects throughout their E Block year.

At the end of the D Block year each student is expected to arrange at least two weeks of work experience in an area of interest to them, and in the summer of the E or D Block students are encouraged to take part in the National Citizen Service scheme.

DIVINITY

AIMS

Divinity is the term we use at Rugby for Spiritual Development. This happens in every part of our communal life, with Chapel, Campus and Classroom each making their contribution. Divinity helps students to become self-reflective, inquisitive, tolerant, empathetic and well-informed, thus building their personal strength and resilience and forming them into better citizens and better people. Its main, but not sole, pillar is Christian faith grounded in real life, broad and tolerant.

NATURE OF THE COURSE

The E Block course examines the seven major world views: Atheism; Theism; Deism; Nihilism; Polytheism; Pantheism; and Postmodernism. Examples of religious and non-religious teachings are studied in detail. Beliefs and practices are learned in their contexts and related to current affairs. In the D Block we make a study of Ethics in theory and in practice.

There is no examination in Divinity – when the subject is Spiritual Development, life itself is the exam. There is only one assessment criterion – a life well-lived. To this end, the course encourages not just reflection but self-expression, with students having opportunities to ask questions and engage in debate. The absence of formal assessment allows freedom of thought and expression, intellectual risk-taking and the experience of changing one’s mind on the basis of new evidence.

ENRICHMENT OPPORTUNITIES

Divinity in the classroom is just one aspect of Rugby’s vision for Spiritual Development. It is complemented by the rhythm of regular worship in Chapel; by the Chaplains’ ministry within the community; and by the whole moral, spiritual and ethical framework on which our school is built.

Specific enrichment opportunities include voluntary groups such as Christian Forum, Junior and Senior Bible Studies and informal meetings at the Chaplains’ homes but our aim is that the entire experience of being a member of the community of Rugby School should be an enriching one, rooted as it is in tradition yet responsive to the present, steeped in the timeless traditions and values of the Christian faith. In such a community we learn a confidence that is not arrogance, humility that is not timidity, and the resilience which comes from honest self-reflection and a selfless attitude of service to others.

LEARNING DEVELOPMENT

Learning Development classes may be chosen by students for whom it is appropriate as one of the options in the E Block. In some cases, Learning Development may be taken instead of the compulsory modern language. In such cases, application must be made directly through the Deputy Head Academic.

Although it is primarily intended for students with dyslexia / specific learning difficulties, or for foreign speakers, Learning Development is also available to those students whose teachers feel they need additional support. There is no additional charge for these lessons as they are in option time.

SPECIFIC LEARNING DIFFICULTY

The focus of specialist tuition is on advancing literacy and learning skills, the aim being to raise the standard of written work so that it more fairly reflects underlying ability.

- A structured programme of work is followed which is adapted to meet individual student needs.
- All students are encouraged to develop a better awareness of how they learn most effectively, so that they have greater control over managing their learning, enabling greater independence.
- Work covered in Learning Development lessons should be reflected in progress across all subjects. In order to make learning more effective and realistic, tuition is, wherever possible, based on (or related to) current assignments.
- Support and advice on coursework are an important part of our work, especially in the D Block.
- Considerable emphasis is placed on building confidence and improving self-esteem.

ENGLISH AS AN ADDITIONAL LANGUAGE (EAL)

If English is not your first language and you need some help, then you should choose Learning Development (EAL) as an Option, or instead of a Modern Language. If EAL is chosen in place of a language, application should be made directly through the Deputy Head Academic.

- We discuss many different topics so that you quickly improve your pronunciation and range of vocabulary and get used to asking questions and giving your opinion.
- We watch videos and listen to tapes to improve your comprehension and ability to take notes.
- We practise writing in different styles and layouts so that you are able to write essays and reports for your other subjects.
- We concentrate on developing your essay technique so that you can plan and structure your coursework.
- We work closely with your English teacher and provide additional support to help you with your English GCSE literature and Media coursework.

PSHE

AIMS

Our PSHE programme complements the School’s pastoral provision and academic curriculum and contributes to the fulfilment of the School’s ethos of providing students with a genuinely holistic education.

PSHE education equips young people with the knowledge, understanding, attitudes and practical skills to live healthy, safe, productive, fulfilled, capable and responsible lives. PSHE education encourages young people to be enterprising and supports them in making effective transitions, positive learning and career choices and in managing their finances effectively. It also enables young people to reflect on and clarify their own values and attitudes and explore the complex and sometimes conflicting range of values and attitudes they may encounter now and in the future.

NATURE OF THE COURSE

Our PSHE curriculum is based on the PSHE Association’s Programme of Study. In the E and D Block, PSHE is delivered by topic specialists and is complemented by a wide variety of outside speakers, who cover subjects such as drug awareness, life choices, responsibility and relationships.

ACADEMIC ENRICHMENT

There is a considerable range of subject-specific academic enrichment available to our E and D Block students; however, we also run a core academic enrichment programme that all E and D Block students are encouraged to participate in.

In the E Block this takes the form of debating and model united nations that allow students to develop their skills of oracy in a collaborative setting. In the D Block, students are invited to write an academic paper and to participate in an academic conference. This is an experience that we hope will give insight into life in the Sixth Form and higher education.
